

SpectraSan™ Spa & Whirlpool Cleaner

- Eliminates strong chemical odors
- Eliminates skin and eye irritation
- Eliminates unsightly laden scum lines
- Significantly reduces filter cleaning
- Dramatically reduces spa maintenance
- Reduces nutrient sources for bacterial growth

Spas, whirlpools, hot tubs and hydrotherapy equipment water is constantly absorbing organic material from its environment. Recirculation hydrotherapy equipment makes this problem worse, due to the smaller volume of water and increased water temperatures. These organic contaminants actively build up in the spa water, filter, and supply lines.

SpectraSan™ Spa & Whirlpool Cleaner naturally biodegrades spa water contaminants such as body oils, sweat, urine, cosmetics, hair care products, suntan and sunscreen lotions, soaps, deodorant and scented spa oil products that quickly accumulate in the water. Much of this organic matter is not filtered out before it begins to collect on the walls, filter, and inside the supply lines. **SpectraSan™ Spa & Whirlpool Cleaner's** multi-enzymatic formulation tackles lipids in body oils, dissolving them enough to break their bond and return them to the filter. This all natural, environmentally safe product is not meant to totally replace sanitizers such as bromine or chlorine, but periodic cleaning of the recirculation equipment will greatly reduce the amount of these chemicals consumed.

Works Like Magic

SpectraSan™ Spa & Whirlpool Cleaner is planet safe. It contains all natural enzymes, like those found in our own body, and they are designed by nature to break down or biodegrade organics. These enzymes effectively break down organic waste to basic elements like carbon dioxide and water that dissipate into the air.

All Natural and Safe

SpectraSan™ Spa & Whirlpool Cleaner contains plant derived enzymes, all natural coconut surfactants and essential fragrance oils that are 100% biodegradable, non-toxic, non-caustic and non- acidic. It contains **no** alcohols, solvents, bleach or oxidizers and has a skin-safe neutral pH. This product is environmentally safe to use around people, pets, plant life and marine life.

Fast, Easy, and Economical

SpectraSan™ Spa & Whirlpool Cleaner is an ideal preventative maintenance tool. Keep your hydrotherapy equipment clean, sanitized and bacteria-free. We recommend filling the unit with warm water, then mixing 1 ounce per 5 gallons of water into the recirculation system. Circulate the solution for 20 minutes, then drain and rinse. That's it! Excessively used spas, hot tubs, and whirlpools should be cleaned daily, while less frequently used equipment may only require once a week cleaning. Remember, it costs pennies to use, yet gives you peace of mind sanitation the easy way—*Nature's Way*.
